## Senegal: Working to Provide Health Care Access to All

The Abt Associates-led projects in Senegal primarily are working to create a more effective, better-managed health system that ensures a healthier, more productive population.

**The Senegal Health Systems Strengthening Plus (HSS+)** project is strengthening community engagement in health care and providing an enabling environment for universal health coverage, made possible through community-based health insurance schemes.

The **Sustaining Health Outcomes through the Private Sector (SHOPS) Plus** Project is working to increase utilization of priority health products and services in the market and improve the enabling environment through private sector stewardship.

**The President’s Malaria Initiative Africa Indoor Residual Spraying (PMI AIRS)** Project has protected more than 3.4 million people from malaria in Senegal since 2012, including more than 700,000 children under five.

The **Health Finance and Governance project** researches issues to inform decision-making, including universal health coverage and malaria control tactics.

### Abt’s projects have covered all of Senegal’s 14 regions.

**SENEGAL HSS+ 2016-2021**  
HSS+ supports USAID’s direct health financing in Senegal’s 6 regions and **working to strengthen community engagement** in health care and provide an enabling environment for universal health coverage.

**SENEGAL GOTAP 2016-2021**  
GoTAP provides analytic, management, and logistic support services that **enable the ministry of health to accelerate and sustain health gains**.

**SENEGAL HSS 2012-2016**  
Senegal HSS **helped the government of Senegal design and implement key reforms** to achieve universal health coverage.

**SHOPS PLUS 2016-2020**  
SHOPS Plus has worked to **increase private health provider access to bank loans**, mapped all private health sector facilities, and promoted the use of health services.

**PMI AIRS 2012-PRESENT**  
PMI AIRS has **protected more than 3.4 million people from malaria** in Senegal since 2012, including more than 700,000 children under five.

**HFG 2014-PRESENT**  
HFG **completed a cost-effectiveness analysis** of the different packages of malaria interventions implemented in the country.
